Primate Observation Form

(Use the back for continuations or additional observations)

Observer:		Zoo:		
Date of observation:				
Time observation began:	Time observation ended:			
Common name of primate:				
Scientific name of primate:				
	,			
Suborder:	Subfami	ly:		
Infraorder:	Genus:			
Superfamily:	Species:			
Family:				
Description of enclosure, setting, and weather:				
What kind of environment does this primate live in ir	n the wild	? Is the enclosure a reasonable substitute? Why?		

		Observer: Common name of primate:	p. 2
			·
	you actually observed, not uals you actually observed:	t just as listed on zoo information):	
Total number of individ	uais you actually observed:		
Adult females:	Adult males:	Adults of undetermined sex:	
Juvenile females:	Juvenile males:	Juveniles of undetermined sex:	
7.0			
Infants:			
Describe any observable	e subgroups (mated pairs, m	others with infants, etc.):	
What size and composit	ion of group does this prima	ate live in in the wild? Is the zoo group comparable?	
Explain.			
Explain.			
If the zoo group is differ	ent from a typical wild grou	up, in what ways might the differences affect their bel	navior?
Comments, problems in	making observations, etc:		
_			

	(Observer:	p. 3	
Physical characteristics	•	Common name of primate:		
Physical characteristics: Approximate body size (estimate, describe, or compare to familiar animals):				
ripproximate body size (estime	ice, describe, or compare to r	ummar ummars).		
Which are longer, the forelimbs or the hindlimbs?				
which are longer, the foreinno	s of the inflamilos.			
Tail?	Prehensile?			
Describe how the tail (if preser	nt) was used while you were	observing:		
(1	,	6.		
Can you tell the sexes apart? H	ow? What differences (sexu	al dimorphism) can you actually observe?		
Canines observable?	Size of canines relative to o	other teeth:		
	Male:	Female:		
	which you could see the can	nes (if you could), including the age and sex of the	he	
individual, if you could tell:				
Other notable or interesting phy	vsical features observed			
outer notable of interesting pri	, sicul Teatares Sesser vea.			
A (11 ' () 1	. 10			
Any notable or interesting physical features that you read about but could not observe; why not?:				

	Observer: Common name of primate:	p. 4
Motor behavior:	Common name of primate:	•
Describe the primates' locomotion, as you observed it:	_	
Things to consider: context of locomotion (on the ground of limbs (quadrupedal, quadrumanual, bipedal, vertical clivs. hindlimbs; position and use of hands and feet (graspin knuckles). You may see several forms of locomotion, p on the ground, etc.); please describe all of them.	inging and leaping, brachiation); use of forelimbs g, sole/palm down, edge of foot down, leaning on	S
Describe the positions assumed when not moving from pl	aca to place:	
Describe the positions assumed when not moving from pr	ace to place.	
Use of hands and/or feet and/or mouth to handle objects, it they do it. Specify the kind of grip used if you can tell (<i>propower grip</i> - thumb and other digits wrapped around opportunity)	ecision grip - between tip of thumb and other digits	

Observer:	p. 5
Common name of primate:	•

Social behavior:

Describe the behavior and interactions you observe. What do the primates do? Try to identify the sex and adult/juvenile/infant age category of the participants. Do adults behave differently with infants than with juveniles or other adults? How does their sex affect interactions? Note both behaviors and responses to them. Some behaviors to watch for:

- Interactions while getting food and eating
- Chasing/being chased (age and sex of pursuer and pursued?)
- Vocalizing (what causes them to vocalize? How do others respond?)
- Grooming (describe it. Self-grooming, pairs, multiple individuals? Do some get more than they give?)
- Adults carrying or caring for an infant (is the adult male or female? what does it do?)
- Dominance and submission behaviors (fights, showing canines, getting preferential access to water or food, taking something away from another individual with or without resistance, etc.)
- Forming coalitions (such as two individuals defending themselves against a third)
- Courtship or mounting
- Interactions with human primate visitors
